5.1

ACL® Bubble Trap

Material
1.4404

It should be noted that each separate diameter size of bubble trap overlaps the previous size. This is particularly useful as the small diameter, longer length bubble trap will always have a higher pressure rating than its larger sized diameter alternative. The below data is derived from the underlying principal that the media should remain inside the bubble trap for a minimum of 15 seconds (residence time) and is generated from the basic formula:

$$Rt = \frac{Rfv \times 60}{Q}$$

where;

Rt = Residence Time (greater than 15 seconds)

Rfv = Recommended Fill Volume (litres)

Q = Flow Rate (litres per minute)

Bubble Traps Sizing Guide

Bubble Trap Diameter (inches)	Rec. Fill Volume (litres)	Flow Rate (lpm)	Operating Pressure		Base Inlet / Outlet Ferrule (Flange) Size					Lid Controls (2 Ports) Ferrule (Flange) Size					Lid Controls (3 Ports) Ferrule (Flange) Size

10"	12.00	48.00	3.5 (51)	4.0 (58)			•	•	•	•	•	•	•	•	•	•	•	•	•
	16.00	64.00					•	•	•	•	•	•	•	•	•	•	•	•	•
	20.00	80.00					•	•	•	•	•	•	•	•	•	•	•	•	•

Note: If your exact flow rate is not shown in the table above, the bubble trap sized for the nearest larger/quicker flow rate than yours must be selected. This will guarantee the residence time will exceed the 15 second minimum. For further information about our Bubble Traps, please contact our Sales Department: sales@advanced-couplings.com
